

VIDEO WALL SPECIAL - Video functions

product details

Function 1

3D noise reduction processing technique
processing through internal driver chip
3D comb aluminum foil technique
Better noise reduction

Function 2

3D Comb filtering technique

Automatic 3D motion smooth edge adaptive video decoding technology
3D dynamic image and static image compensation display screen without delay
The picture is smoother and color restoration is higher through the color draft principle engine and edge enhancement operation
Image roaming function is added to make the image quality more exquisite, vivid, clear, natural and perfect

Function 3

Any combination of splicing images-according to request-easily accessible

Screen splicing unit: Each unit can individually show an image-the input signal of each unit can be set at will

Full screen : Full screen displays a complete image

Image roaming: software processing can render any signal to a screen as a point,moving across the whole screen

Image stretching: software processing can render any signal to a screen as a point,stretching across the whole screen

Function 4

Optional combination:Displays any combination of pictures,supports single screen,multi-screen,combination

Function 5

IPS hard screen

Using IPS hard screen professional level color restoration technology, much better than traditional LCD
IPS screen technology of hard screen LCD has faster response speed-video rendering is much smoother
Touching does not cause blur, no ripples, IPS hard screen has stable physical structure.
Compared with the ordinary soft screen, it has more than 10 times higher recovery rate

LCD soft screen

VS

IPS hard screen

Function 6

Wide viewing angle-178 degrees

ISP hard screen has a unique molecular level conversion structure so that the
upper and lower left and right angles can reach 178 degrees of visual angle
The color performance at any angle is not reduced -the visual "dead angle" is eliminated

Function 7

The colors are more professional -16.7M colors

IPS hard screen expert color palette adjustment function can show the realistic image that you deserve
100%RGB color depth lets you notice even the tinniest color difference
More than 16.7M color image-rendering the most realistic visual color

Function 8

Low carbon footprint-friendly to the environment- operating life is long
The simplified design with ultra quiet cooling fan and intelling temperature control circuit to
speed up the cooling rfficiency of the whole machine and prolong operating life
HD picture-showing exquisite image- LCD video wall has sophisticated technology-enjoy the perfect 3D visual effect
prefered solution for monitoring video wall

Successful cases
